Kai and the Moon Train

From a story told by Kai

Nightlight Press

Kai loved trains and space. One bright day in future Fernhush Bay, he told Grandpa, “Let’s build a robot best friend—and ride a train to the Moon!”

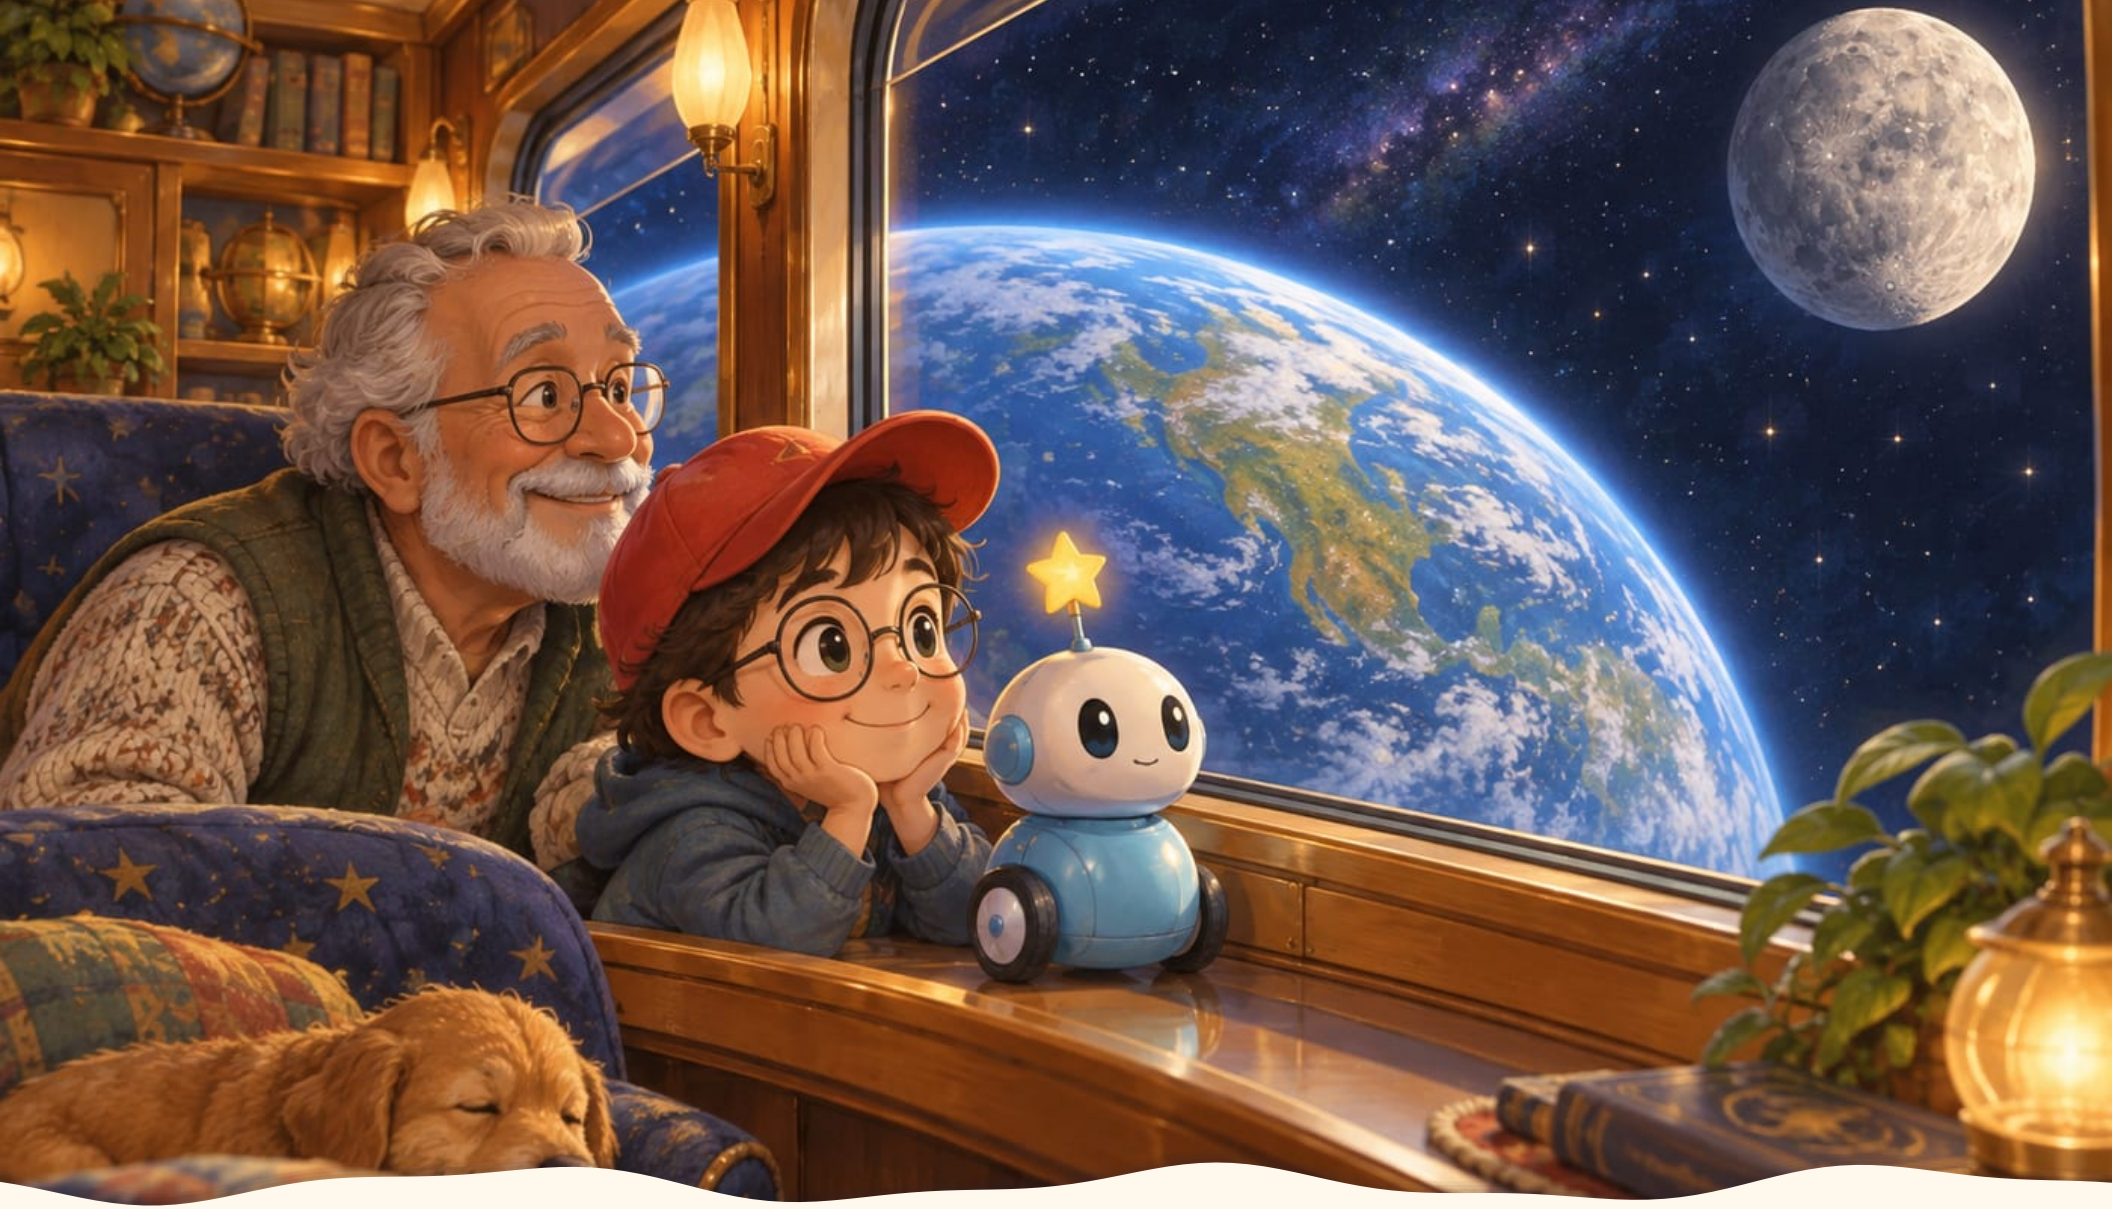

Kai fitted together a round white head, a glossy blue body, two little wheels, and a star-tipped antenna. “Hello, Pip!” he said.

Pip blinked. “I’d love to see the Moon,” Pip said. Kai asked Grandpa to come, too. “Of course,” Grandpa smiled, patting his robot leg.

At the station, Kai, Grandpa, and Pip rolled aboard the moon train. A smooth ramp met the platform, and they found cozy seats together.

The train hummed past the clouds. Kai watched the blue Earth grow small. Pip’s star glimmered, and Grandpa pointed out the Moon ahead.

On the Moon, they stepped onto a wide, quiet path. Kai and Grandpa looked at the Earth together, while Pip rolled close beside them.

“That’s our home,” whispered Kai. Grandpa’s hand rested warmly on his shoulder. Pip said, “I’m glad we came together.”

Soon they rode home beneath the stars. Kai tucked Pip beside his bed and snuggled under his blanket. “Good night, Moon,” he murmured.

Learn about robots

Three true things to wonder about together

Robots use sensors, such as cameras, to notice things around them.

Some robots help doctors move tools during surgery.

People teach some AI by showing it many examples.

The End

Sweet dreams.

Kai loves trains and space, so he builds Pip, a robot best friend, for a trip to the Moon. With Grandpa beside them, they ride the moon train and discover a bright, quiet view of home.
